LCP LYCORSEAM®
Metal Roof & Wall Cladding System

Integrity In Partnership

CERT NO. FM 59595
BS EN ISO 9001: 2008
FEATURE

LCP LYCORSEAM® standing seam roof system emanates modernity and versatility in architectural appeal, yet highly functional. Its concealed clips are specially designed to minimise heat conductivity whilst maximising thermal expansion sliding efficiency.

LCP LYCORSEAM® is an ideal choice for aesthetically pleasing standing seam roof system.

EXCELLENT PROPERTIES

- Exceptional waterproofing roof system due to its high ribs – minimum of 1° pitch is possible.
- No exposed fixing on roof, thus eliminates risk of leakage.
- LCP LYCORLINER™ – purpose-built liner to ensure integrity of system.
- Long spanning capability due to LCP LYCORCLIP™ – specially designed concealed clips.
- LCP LYCORCLIP™ - specially designed to minimise heat transfer.

AESTHETICALLY PLEASING & COST EFFECTIVE

- Cost effective solution when used as single-skin in steel - due to its inherent strength.
- Tapered or Straight panels, Smooth or Crimped-curve capability – offers design options and with different metals, ferrous or non-ferrous.
- Quick and simple installation – resulting in cost savings.
- On-site roll-forming capability – offering further design options.
MATERIALS

Steel

The strength and formability of steel makes it an ideal material for roof and wall panels. LCP LYCORSEAM® is a cold roll formed roof and wall cladding manufactured from high strength steel of G300 base material (300MPa minimum yield stress), with ZINCALUME® steel (Zinc & Aluminium alloy) coating, in accordance with AS 1397 and COLORBOND® pre-painted steel in accordance with AS 2728.

COLORBOND® pre-painted steel shall achieve CLASS ‘0’ in accordance to BS 476 PART 6 & 7. The core material ZINCALUME® shall be non-combustible in accordance to BS 476 PART 4.

Aluminium

Available in mill finish or pre-painted, aluminium provides another choice of material for LCP LYCORSEAM® in demanding environmental situations as well as fulfilling your challenging roof designs. Working in close consultation with leading aluminium mills on appropriate selection of alloy, temper, hardness and paint system, LCP LYCORSEAM® is practically tailored to the individual needs and demands of your projects.

Other Materials

LCP LYCORSEAM® is also available in other non-ferrous materials, e.g. titanium-zinc, copper, etc. For further information, please contact LCP Building Products Pte Ltd.

ADVERSE CONDITIONS

If LCP Building Products Pte. Ltd. range of roofing, walling or rainwater products within 1km of salt marine or industrial and unusually corrosive environments, please contact our Technical Department for advice.

COLOUR COATING OPTIONS

Clean COLORBOND® pre-painted steel is resistant to dirt pick-up and staining. The various categories of Clean COLORBOND® pre-painted steel finishes offer excellent gloss and long lasting life span to the roof and wall cladding.

The following Clean COLORBOND® pre-painted steel finishes are available:

1. **Clean Colorbond® Ultra Steel** (Used for severe applications that require premium durability.)
2. **Clean Colorbond® XPD Steel** (Used for moderate/severe applications that require premium durability.)
3. **Clean Colorbond® XPD Pearlescent Steel** (Used for moderate/severe applications that require premium durability and a decorative alternative.)

For appropriate coating option or other materials such as Aluminium, Titanium Zinc, Copper, etc, please contact LCP Building Products Pte. Ltd.

INTERNAL LINER STEEL DECK

LCP LYCORLINER™ is the structural component that provides support and mounting surface for roof build up system. The deck will normally be a galvanised, ZINCALUME® steel (Zinc & Aluminium alloy) or Clean COLORBOND® pre-painted profile available at LCP Building Products Pte. Ltd. LCP LYCORLINER™ can also be a perforated product, which is used for sound absorption.

SUPPORT BATTENS

The battens are also used as support for fastening the concealed clips. These support battens can either be Z-shape or top hat section depending on the depth of the roof and application of the internal liner.
The roofing and/or wall cladding metal sheets shall be 0.55 mm BMT. **LCP LYCORSEAM** produced by **LCP Building Products Pte. Ltd.**, with 65mm rib height at 380 mm or 408 mm panel cover width. The sheets shall be installed using concealed fixing clips in accordance to manufacturer’s recommendations. The fasteners used to secure the fixing clips to the supports shall conform to Australian Standard AS3566 and be compatible with the roofing material used. The clips shall be concealed and no fasteners are to penetrate the cladding. The **LCP LYCORSEAM** ribs must be mechanically seamed to complete the installation of the roof.

The sheeting material shall be protected steel sheet in accordance to Australian Standard AS1397 with a minimum yield stress of 300MPa (Grade G300), metallic hot-dip coated with aluminium/zinc alloy comprising 55% aluminium, 43.5% zinc and 1.5% silicon. The minimum coating mass for the aluminium/zinc alloy coated steel shall be AZ200 (200 g/m² minimum coating mass) as determined by Australian Standard AS1397.

Wherever applicable, the installation of the metal sheets shall be in accordance to the "Installation code for metal roofing and wall cladding; Standards Australia SAA HB39-1997".

A minimum of 50mm shall be provided for projection into gutters. Flashings shall be supplied in compatible materials, as specified. Minimum cover of flashing shall be 150mm.

All sheeting shall be fixed in a workman like manner, leaving the job clean and weather-tight. All debris (nuts, screws, cuttings, filings etc.) shall be cleaned off daily.

Note: For specification of **LCP LYCORSEAM** in non-ferrous metals, please contact **LCP Building Products Pte Ltd.**

**INSTALLATION PROCEDURE**

The support for the insulation will either be wire mesh, reinforced vapour barrier or **LCP LYCORLINER** secondary roof. For STC roof system, **LCP LYCORLINER** is first installed over the purlins. Thereafter, **LCP LYCORCLIP** should be fixed at alternate pans of **LCP LYCORLINER**, with 50mm thick rockwool laid between. Following this, **LCP LYCORSEAM** roof sheets are fixed on **LCP LYCORCLIP**. The final step is to mechanically seam the ribs for the entire length of the panel.

For installation procedure of single-skin in steel, please contact **LCP Building Products Pte. Ltd.**, Technical Department.

**FIXING REQUIREMENT**

During installation, there are loads that will act on the panel parallel with any plane. This has the effect of pulling the panel down the slope of the roof. If the panel is not adequately fixed to the structure to prevent such drag loads, it will creep down the plane of the roof. Establishing the points of fixity depend on the roof type, clip type and amount of movement. Please contact **LCP Building Products Pte. Ltd.**, Technical Department, for more details.

Note: For some curve roof applications such as barrel roofs, special fixings may be required. Please consult **LCP Building Products Pte. Ltd.**, Technical Department, for further assistance.

**PROPERTIES**

### LCP LYCORSEAM® - Effective Cover Width Table

<table>
<thead>
<tr>
<th>Rib Height</th>
<th>Effective Cover Width</th>
<th>Colorbond® (TCT)</th>
<th>Aluminium (BMT)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>0.61 mm</td>
<td>0.71 mm</td>
<td>0.80 mm</td>
</tr>
<tr>
<td>65mm</td>
<td>380mm</td>
<td>6.82</td>
<td>7.99</td>
</tr>
<tr>
<td></td>
<td>408mm</td>
<td>6.67</td>
<td>7.81</td>
</tr>
</tbody>
</table>

The allowable tolerance shall be ± 4mm. For other cover widths availability, please contact LCP Building Products Pte. Ltd., Technical Department.

### LCP LYCORSEAM® Permissible Wind Load Table

<table>
<thead>
<tr>
<th>Rib Height</th>
<th>Effective Cover Width</th>
<th>Clip Spacing (mm)</th>
<th>Permissible Wind Load (kPa)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>0.61 mm</td>
<td>0.71 mm</td>
<td>0.80 mm</td>
</tr>
<tr>
<td>65mm</td>
<td>380mm</td>
<td>1200</td>
<td>5.50</td>
</tr>
<tr>
<td></td>
<td>408mm</td>
<td>1200</td>
<td>5.10</td>
</tr>
</tbody>
</table>

Note: Wind capacities are based on clips with two #10 screws on 1.5mm thick G450 purlin. The LCP LYCORLINER® or LCP LYCORRIB® 762 will be used as liner beneath the LCP LYCORSEAM®. The purlin spacing is to be in accordance with the loading allowable in the LCP Building Products Pte. Ltd. Product Catalogue for LCP LYCORRIB® 762 profiles.

For maximum purlin spacing and clips, please contact LCP Building Products Pte. Ltd., Technical Department.

### THERMAL MOVEMENT

### LCP LYCORSEAM® Length & Thermal Movement

<table>

LCP LYCORSEAM® can be pre-curved in the factory prior to delivery to site or sprung curved on site during installation.

* Please consult LCP Building Products Pte. Ltd., Technical Department for smooth curve limits.

TAPERED SHEET and WAVEFORM: For sprung and pre-curve sheet requirements, please consult LCP Building Products Pte. Ltd., Technical Department.

</tbody>
</table>

LCP LYCORSEAM® roofing has excellent water-carrying capacity. This and the sheeting stiffness enable roof slope to be as low as 1° for many applications. It is imperative that this minimum slope is adhered to all points of the roof to prevent ponding from occurring. Roof run lengths are the combined lengths of all roof elements contributing to a single pan drainage path. This can include the roof length upstream of a roof penetration that concentrates flow into other pans. The table above gives slope for 100 year return period rainfall intensity. For more information, please contact LCP Building Products Pte. Ltd., Technical Department.
LCP LYCORSEAM® SPECIAL APPLICATION

ACOUSTIC and THERMAL REQUIREMENTS

LCP Building Products Pte. Ltd. can provide standard details for various Sound Transmission Class (STC) and Impact Isolation Class (IIC), if required. The thermal resistance will vary depending on the roof design and would have to be calculated by the designer, if required. Please consult LCP Building Products Pte. Ltd., Technical Department, for assistance with your roof design.

BUILD-UP FOR STC (SOUND TRANSMISSION CLASS) 56, TESTED IN ACCORDANCE WITH ASTM E90 – 97

GREAT ROOF SYSTEM

STC

25 Normal speech can be heard easily
30 Loud speech can be heard
35 Loud speech can be heard, but not understood
42 Loud speech can be heard only as a murmur
45 Must strain to hear loud speech
48 Only some loud speech can be barely heard
53 Loud speech cannot be heard
**PANEL FIXING CLIPS**

A specially designed concealed clip allows movements of sheeting arising from thermal expansion and contraction. **LCP LYCORCLIP** is hidden within the seam, engaging the rib. The clip spacing is coordinated with the panel size and structural characteristics to provide the necessary wind uplift resistance.

**BARGE HOLD DOWN BRACKET**

Use for holding down the starting and the end panel, also will served as a fixing bracket for barge flashing.

**SEAMING MACHINE**

Power Seaming Machine Tool.

**LCP TOPHAT BRACKET**

Use when thicker Roof Build-up is required for higher acoustic and thermal application.

**HAND SEAMING TOOLS**

Manual Seaming Tools.

**EAVES ANGLE BRACKET**

This bracket serves as drip mold to the roof eaves, preventing back flow of water to the underside.

**END-CLOSURE BRACKET**

Serve as End-closure to control back-splash of rain water and as a fixing bracket for flashing.
FOOT TRAFFIC

When walking on LCP LYCORSEAM®, always wear clean, non-marking and flat rubber soled shoes. Avoid unnecessary foot traffic and walk on the flat of the panel at or near the supporting roof structural members as much as possible. Do not use the roof panel as a working platform.

LAPPING OF SHEET

The minimum end lap should be 250mm when lapping metal to metal. It is recommended that the laps be laid in a staggered fashion on adjacent roof sheets so as to enhance aesthetics.

Note: Lapping, only possible with minimum roof pitch of 3°.

LCP LYCORSEAM® LAPPING DETAIL

COMPATIBILITY

Lead flashings should not be used in conjunction with ZINCALUME® steel or Clean COLORBOND® pre-painted steel sheeting. Drainage from ZINCALUME® or Clean COLORBOND® pre-painted steel roofing (inert materials) should not be allowed to discharge onto galvanised rainwater components. Drainage from copper roofing should not be allowed to discharge onto ZINCALUME® steel, galvanised, Clean COLORBOND® pre-painted steel or aluminium rainwater components. Each of these combinations may lead to premature corrosion.
**ORDERING**

When ordering, please have the following information available to ensure a speedy processing of your requirements:

- Customer/Company name, address, phone number & fax number.
- Contact person name & phone number.
- Name of Product (e.g. LCP LYCORSEAM®) and material (e.g. G300 steel). Thickness of product (e.g. 0.61mm TCT).
- Coating or Colour (e.g. Clean COLORBOND®: Enduring White colour).
- Number/quantity and length of sheets (e.g. 10 pieces of 5 metres length per piece).
- Flashing – style, quantity and colour.
- Delivery address (e.g. No. 10 Telok Kurau Lane, Singapore).
- Delivery date & preferred time.
- Site access (please specify whether current access to delivery location would permit entry by standard 12 metres length flat-bed trailers).
- Cranage requirement (please specify whether cranage will be required at site).

**LENGTH**

The sheets are manufactured at LCP Building Products Pte. Ltd., factory or on construction site. The length of the sheet is a function of design requirements, geometry of the roof (i.e. curving or other factors), site conditions and workability, height of the rib and transportation constraints.

Lengths specified must be actual site measurements and not plan dimensions. The length should be measured accurately, and allowance should be made for clearance at the ridge (unless the sheet is continuous over the ridge) of normally around 50mm. At the eaves, the overhang allowed for into the gutter which is normally not less than 50mm. Where a “step down” or expansion joint is incorporated into the roof, an allowance of not less than 300mm should be added. The tolerance of the length of product supplied is +0, -15mm.

**FLASHING**

Standard flashings are readily available for use with LCP LYCORSEAM® roofing. LCP Building Products Pte. Ltd. will give design advice for flashing details and manufacture the required flashing.

**DURATION**

Delivery can normally be made within 2 or 3 days, subject to the delivery location and material availability, or can be at a pre-arranged date and time. Please assist us to provide undamaged product by ensuring that suitable arrangements have been made for truck unloading. When lifting sheeting by crane, care should be taken to ensure that the load is spread to prevent sheeting damage. Where a crane is not available, sufficient labour must be supplied to assist in manual unloading.

**HANDLING**

LCP LYCORSEAM® (especially Clean COLORBOND®) should be handled with care at all times to preserve the quality of the finish. Packs should always be kept dry and stored above ground level whilst on site. If however the sheets have become wet then they should be separated, wiped and placed in the open to aid in drying.

**FASTENERS**

All fasteners should conform to AS 3566 and be compatible with the roofing material used. The fastener of the roof clip to support the standing seam is gauge # 10 screw. The flat shape of the screw head is very important, as a high head will puncture the flat pan of the roof sheet.

**CUTTING**

Sheeting can be cut, where necessary, by means of metal snips or electric nibbler. The use of cutting discs should be avoided but if it is used, the Clean COLORBOND® pre-painted steel sheeting should be placed downwards, or carefully shielded, to minimize the risk of hot filings embedding in the painted surface.

**CLEAN UP**

Ensure that all debris, nails, rivets, screws, rags, and especially filings & particles from cutting or drilling, are carefully cleared from the surface after each day’s work or premature corrosion could occur.

**OIL CANNING**

As in all flat pan-roofing profiles, the flat surfaces of the metal sheets may exhibit some degree of undulation known as “oil canning”. The extent and degree of oil canning will generally depend on factors such as width of the flat pan, the radius of the curved roof, variations in level of the purlins or batten supports, etc. Please note the oil canning is regarded as an inherent characteristic, not a defect of flat pan roofing profiles. As such, oil canning of LCP LYCORSEAM®, if present, shall not form the basis of product rejection by the end-user.

**IMPORTANT NOTE**

The information published in this brochure is as far as possible accurate at the date of publication, however, prior to application in a particular situation, LCP Building Products Pte. Ltd. recommends that you obtain qualified expert advice confirming the suitability of product(s) in question for the application proposed. While LCP Building Products Pte. Ltd. accepts its legal obligations, be aware however that to the extent permitted by law, LCP Building Products Pte. Ltd. disclaims all liability (including liability for negligence) for all losses and damages resulting from the use of the information provided in this brochure.
